What Is the Kolbe Index Test?

The Kolbe Index Test is a scientifically validated assessment developed by Kathy Kolbe, a renowned innovator in the field of human performance. It measures a person's instinctive methods of operation, known as their conative strengths—those aspects of the mind related to action, instinct, and motivation. Unlike IQ or personality assessments, which analyze learned behaviors or emotional tendencies, the Kolbe Index aims to reveal the natural, spontaneous ways individuals approach problem-solving, decision-making, and task execution.

Key Features of the Kolbe Index:

- Focus on Conative Strengths: The test identifies how you instinctively take action.
- Short and Accessible: Typically takes around 20-30 minutes to complete.

- Scientifically Validated: Backed by research and extensive data validation.
- Practical Application: Provides insights that can influence team composition, job placement, and personal development.

The Underlying Philosophy: Conative Intelligence

Understanding the Kolbe Index requires grasping the concept of conative intelligence, which pertains to the aspect of the mind responsible for volition, desire, and instinct. While cognitive intelligence (IQ) relates to reasoning and knowledge, and emotional intelligence (EQ) pertains to understanding emotions, conative intelligence reflects the innate drive to act.

Kathy Kolbe's theory posits that everyone has a unique conative profile—an instinctual approach to problem-solving—that remains consistent over time. Recognizing and leveraging these natural instincts can lead to greater efficiency and satisfaction in work and life.

How Does the Kolbe Index Test Work?

The Kolbe Index is designed as a straightforward, self-administered questionnaire that evaluates four key conative instincts, each representing a different mode of action:

- Fact Finder (How you gather and share information)

This dimension measures your instinct for researching, analyzing, and communicating details. Some individuals prefer to gather comprehensive data before acting, while others rely on a quick overview.

- Follow Through (How you organize and implement plans)

This assesses your natural tendency to structure processes, create routines, and follow systems, vs. being more flexible and spontaneous.

- Quick Start (How you handle risk and uncertainty)

This dimension evaluates your comfort with spontaneous decision-making, innovation, and risk-taking, versus a preference for stability and caution.

- Implementor (How you handle physical space and tangible items)

This measures your instinctive approach to working with space, tools, and physical objects, including practical tasks like building, designing, or manipulating physical materials.

The Assessment Process

Participants complete a series of multiple-choice questions that ask about their natural responses in various scenarios. The questions are designed to be simple, direct, and free of social desirability bias, ensuring authentic responses. The result is a Kolbe Conative Index Profile, which provides a numerical score for each of the four action modes.

Interpreting the Results

- Profiles: The scores generate a profile that illustrates your instinctive strengths and tendencies.
- Action Modes: The results help identify whether you are, for example, a ?Follow Thru? or ?Quick Start? dominant, guiding how you approach projects.
